

New tool in diagnosing coronary artery disease!

We are proud to announce the opening of the
FIRST
 dedicated cardiac PET scanner.

Less time needed to image patients (30–45 minutes vs. 2–3 hours).

Higher resolution images (3–4 mm vs 7mm).

Less radiation exposure to the patient.

More precise measurement of heart function and volumes.

Less artifacts (breast and diaphragm attenuation).

Please call us at one of our offices below to schedule an appointment for a consultation with one of our Cardiologists.
